

# Network Design

## What it is

- The Network Design App is a great tool for optimizing your end-to-end Supply Chain.
- It allows you to calculate the optimal number and locations of your warehouses.
- Determine to optimal product flows through your Supply Chain.

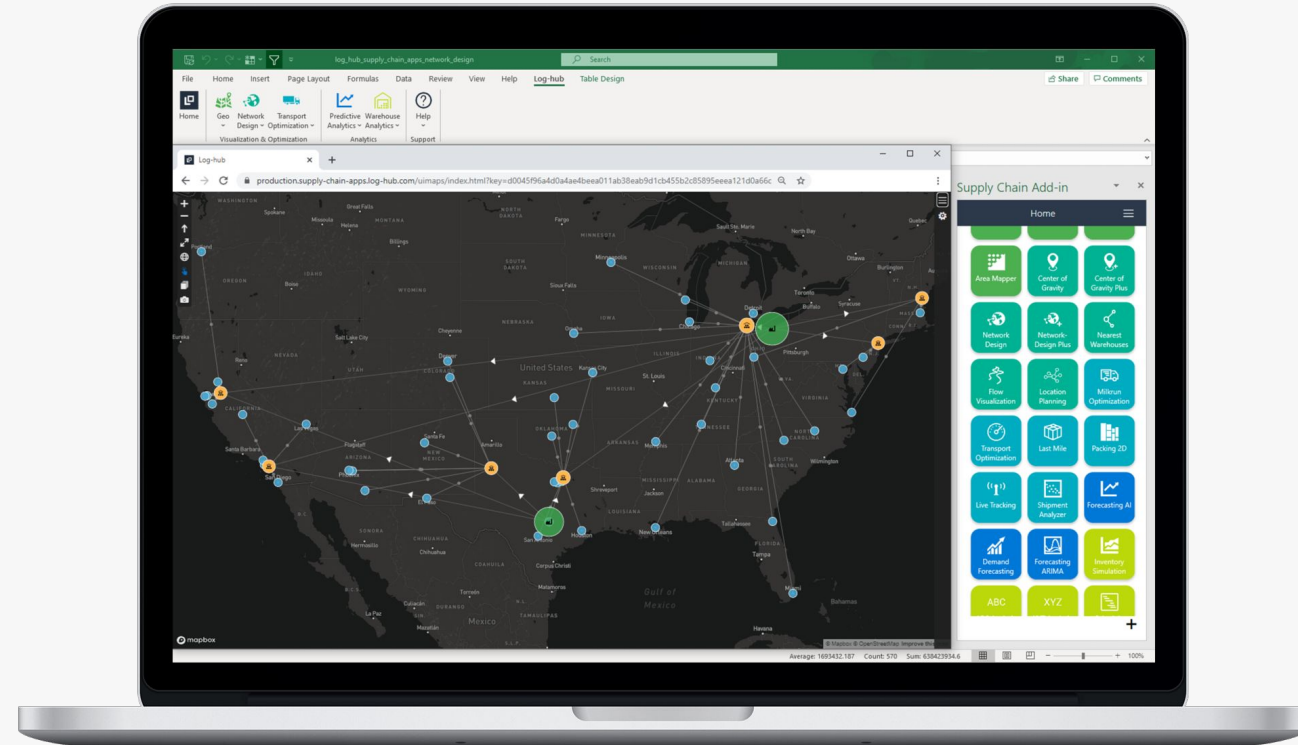

## What it delivers

- Find the global optimum – regarding transport and warehouse costs, minimum and maximum warehouse capacities etc.
- Define service level requirements for each customer that have to be fulfilled.

## What are the benefits

- Run network design studies by your own and simulate the effects of future demand changes on your Network Design.
- Solve complex models through processing power from the cloud.
