

Packing 2D

What it is

- The Packing 2D App is a great tool to simulate the packing process of packages into containers.
- Simulate scenarios to evaluate the effects of different transport units regarding costs and utilization.

What it delivers

- Optimal packing plan for multiple relations.
- Intelligent packing algorithm that minimizes cargo space for thousands of packages in seconds.

What are the benefits

- Reduce transportation costs through optimal cargo utilization.
- Find out how many containers/vehicles are needed on which relation.
- Simulate demand changes and get new insights regarding cargo utilization.
